BADU FLOWSONIC

BADU FlowSonic+

Article number 2716520002

Product page https://www.speck-pumps.com/en/p/badu-flowsonic-2716520002

Description

Flow measurement via ultrasound.

Areas of use

These ultrasonic flow meters are ideal for measuring volume flow: precise, loss-free, and calibration-free. With a measuring range of 0–54 m³/h and the ability to handle up to 3% salt content in pool water, they are particularly well-suited for monitoring and displaying flow in pool systems. Variable-speed pumps can be adjusted to the appropriate flow rate. The FlowSonic+ can be used as a standalone solution, allowing manual analysis and individual flow adjustment. The ability to configure settings via the smartCONNECT app expands the application areas of the FlowSonic+ and makes it highly flexible. The FlowSonic communicates with BADU Blue and BADU Blue Pro, as well as other pool control solutions that can process a digital signal (pulse signal) or a 4–20 mA analog signal. ```
